TITLE: The Third All-Union Seminar on Oxidation-Resistant Coatings

11
16

SOURCE: Atomnaya energiya, v. 21, no. 4, 1966, 316-317

TOPIC TAGS: seminar, oxidation resistant coating, protective coating, heat resistant coating, diffusion coating, refractory metal coating, steel coating, nonmetallic material coating

ABSTRACT: The third Seminar on oxidation-resistant coatings, sponsored by the Institute of the Chemistry of Silicates, Academy of Sciences SSSR, was held in Leningrad on 27-31 May 1966 and was attended by 420 representatives of 130 organizations. Fifty reports were presented. New theoretical developments in physicochemical processes of coating formation in molten and gaseous media were dealt with in reports of V. P. Elyutin, N. N. Rykalina, A. A. Appen, M. A. Maurakh and M. Kh. Shorshov. Of theoretical and practical interest was the report of A. I. Avgustnik and G. I. Zhuravlev on the thermal shock resistance of ceramic coatings. G. V. Karpenko described the method and a semi-industrial unit for diffusion coating steels, evaluated the oxidation resistance of diffusion layers at various temperatures, and discussed the effect of chromium, vanadium and aluminum diffusion coatings the

TITLE: Gamma-neutrino correlation in muon capture

SOURCE: Zhurnal eksper. i teoret. fiziki, v. 44, no. 5, 1963, 1679-1686

TOPIC TAGS: Gamma-neutrino correlation, muon K-capture, pseudoscalar interaction constant

ABSTRACT: A formula for the correlation of the directions of emission of the neutrino and Gamma-ray quantum with the direction of the muon beam is obtained for the case of allowed K capture. It is shown that the Gamma-Nu correlation for the capture of an unpolarized muon is very sensitive to the magnitude and sign of the constant of the induced pseudoscalar interaction, so that a study of this angular correlation can yield more accurate information about the sign and magnitude of the pseudoscalar interaction constant and the contribution of "weak magnetism" than is given by some of the other performed experiments. Such a correlation exists only when there are correction terms, and can amount

Card 1/2

L 10218-63
ACCESSION NR: AP3000068

6

to as much as 20 per cent. A general formula is given for the correlation in muon K capture of any degree of forbiddenness. It is shown that calculation of the nuclear matrix elements is needed only for the estimate of corrections that do not contain the P interaction and the "weak magnetism," but it is necessary to take these corrections into account in determining the lower limit on the asymmetry coefficient. "The author is deeply grateful to V. N. Gribov, A. Z. Dolginov, I. T. Dyatlov, and V. M. Shekter for valuable discussions, and also to V. G. Gorshkov for many conversations." TITLE: Observations of vertically moving disturbances at Irkutsk

SOURCE: Geomagnetizm i aeronomiya, v. 5, no. 4, 1965, 770-771

TOPIC TAGS: atmospheric disturbance, solar activity

ABSTRACT: The article cited below describes vertically moving disturbances of a U-form which appear in the region of critical frequencies of the F2 layer and then move along the F2 layer in the direction of a decrease of frequency. There is a seasonal variation in the frequency of occurrence of such movements. In summer they are observed much less frequently than in winter. In autumn the frequency increases sharply, attaining a maximum in winter. With a decrease of the relative values of Wolf numbers the relative frequency of vertically moving disturbances also decreases. The frequency of appearance of such movements increases with sunrise and decreases sharply with sunset. The frequency of their occurrence may be determined to some degree by the state of ionization of the F2 layer. It can be postulated that vertically moving disturbances are a manifestation of the influence of solar activity on the earth's atmosphere. Orig. art. has: 2 figures. [JPRS] 12

Nuclear Physics, vol. 7, No. 6, p. 591-598, 1958. (No. Holland Publ. Co.)
Physico-Tech. Inst. Acad. Sci. USSR, Leningrad.

Abstract: Explicit formulae for β -2 correlation of oriented nuclei in first forbidden β -transitions are obtained. All five types of β -interaction are considered and the Coulomb field of an extended nucleus is taken into account. Explicit β - γ -correlation formulae for non-oriented nuclei are obtained as a particular case. Angular as well as polarization correlation is considered.

AUTHORS: Dolginov, A. Z., Popov, N. P.

TITLE: Polarization of Beta Electrons From Oriented RaE /9

PERIODICAL: Zhurnal eksperimental'noy i teoreticheskoy fiziki, 1960,
Vol. 38, No. 5, pp. 1518 - 1524

TEXT: The β -transition of RaE is a forbidden transition in first order. The spectrum of the electrons so emitted is, therefore, different from the usual form. A. I. Alikhanov, G. P. Yeliseyev, and V. A. Lyubimov (Ref. 2), and B. V. Geshkenbeyn, S. A. Nemirovskaya, and A. P. Rudik (Ref. 3) have already carried out investigations on the anomalous form of the RaE spectrum and attempted to give a theoretical interpretation of the experiments. It is shown in the present work that the difficulties of interpretation may be overcome by taking account of the transverse polarization of the electrons emitted by a RaE nucleus whose spin is oriented with respect to the external field. If time parity is conserved, the degree of polarization of the electrons in the $[\hat{n}_0]$ direction does not exceed 2%. ($\hat{n} = \vec{p}/|\vec{p}|$, \vec{p} - momentum of the β -electron, \hat{n}_0 - direction

Card 1/3

Polarization of Beta Electrons From Oriented S/056/60/038/005/022/050
RaE B006/B070

of the predominant spin orientation). If the conservation of time parity is violated, the degree of polarization can reach a value of 45%. Using the experimental data concerning the form of the spectrum, and considering the longitudinal polarization of the β -particles, the authors determine the possible range of values of the nuclear matrix elements x and y . $x = i\epsilon_V \int \vec{r}/\epsilon_A \left[\frac{d\vec{r}}{dr} \right]$ and $y = \epsilon_V \int a/\epsilon_A \left[\frac{d\vec{r}}{dr} \right]; \epsilon_V^2 = |C_V|^2 + |C'_V|^2$,

$\epsilon_A^2 = |C_A|^2 + |C'_A|^2$; x and y are real quantities, the C are constants of β -interaction. It appears from the form-factor curves $C(E) = f(E_0)$, shown in the accompanying figure, that the experimentally observed form of the spectrum and the magnitude of longitudinal polarization can be best described by the values of x in the range 0.67 & 1.0 and the corresponding values of y (depending on the radius of the nucleus). The coefficients a_i and b_i in the polarization formula were calculated by taking account of the finite dimensions of the nucleus for the AV-interaction variant. For this purpose, a homogeneous distribution of charge in the nucleus for two values of the nuclear radius ($r_0 = 1.2$ and 1.5 fm) (X)

Card 2/3

83589

Polarization of Beta Electrons From Oriented S/056/60/038/005/022/050
RaE B006/B070

has been assumed at a limiting energy of $E_0 = 3.26 \text{ mc}^2$; a_0 characterizes the deviation of the longitudinal polarization of the β -particles of the unoriented RaE from v/c . The results of numerical computations are given in tables. Table 2 gives the values of a_0 experimentally determined by various authors. K. A. Ter-Martirosyan is thanked for information and interest; L. A. Sliy, B. A. Volchok, B. S. Dzhelepov, and L. N. Zyryanova are mentioned. TITLE:

The Polarization of β -Particles and the $\beta - \gamma$ -Correlation
for the First Forbidden Transitions in Oriented Nuclei
(Polyarizatsiya β -chastits i $\beta - \gamma$ -korrelyatsiya pervogo
zapreshcheniya dlya oriyentirovannykh yader)

PERIODICAL:

Zhurnal eksperimental'noy i teoreticheskoy fiziki, 1959,
Vol 36, Nr 2, pp 529-538 (USSR)

ABSTRACT:

Dolginov (Ref 1) in an earlier paper derived a formula for the angular- and polarization correlations of particles in β -decay (any order of the forbidden transition). In the present paper only forbidden transitions of the first order are dealt with, for which explicit formulae are derived. The method by which the problem is dealt with is described by reference 1. Here the authors confine themselves to finding the mathematical solution; explicit formulae are derived for all five kinds of β -coupling in consideration of the nonconservation of parity. Also the Coulomb (Kulon) field of an extended nucleus is taken into account, and nonoriented nuclei are treated as special cases. It was found that, as expected, at $Z \gg 2A^{\frac{1}{3}}$ E correlation is small also for the first forbidden transitions. In contrast

Card 1/2

The Polarization of β -Particles and the
 $\beta\gamma$ -Correlation for the First Forbidden Transitions in Oriented Nuclei SOV/56-36-2-28/63

hereto correlation is great for $\beta\gamma$ -transitions of oriented nuclei if $Z \gg 2A^{1/3} E$, in so far as this correlation exists for permitted transitions. For aligned nuclei correlation between j_o , p , and k is great at $Z \gg 2A^{1/3} E$ only if the theory is not invariant with respect to time inversion. Mathematical problems are dealt with by a total of 5 appendices. There are 1 table and 10 references, 3 of which are Soviet.

TITLE: Conference on Selenium and Tellurium

PERIODICAL: Zavodskaya laboratoriya, 1960, Vol. 26, No. 12, p. 1443

TEXT: From June 22 to June 27, 1960, the Conference on Selenium and Tellurium was held at the Leningradskiy gornyy institut (Leningrad Mining Institute). It was attended by 110 persons of 49 scientific institutes and plants from 15 economic rayons of the Soviet Union, among them by representatives of works laboratories, scientific research institutes, and other organizations. 22 lectures and 13 reports were delivered, which dealt with problems of physicochemical analysis, the decomposition and the losses in connection with various decomposition methods, quantitative precipitation, the separation and microanalysis, and the phase analysis of selenium and tellurium etc. Mention is made of the Ust'-Kamenogorskiy svintsovo-tsinkovyy zavod (Ust'-Kamenogorsk Lead and Zinc Plant), VSEGEI (All-Union Scientific Research Institute of Geology), UNIPROMED', LGI, UFAN, Noril'skiy kombinat (Noril'sk Combine), GINTsVETMET

TITLE: The Study of Hydration Processes by Means of a Microscopic Motion Picture Assembly (Izuchenie protsessov hidratisii pri pomoshchi mikrokinoustanovki)

PERIODICAL: Tsement, 1958, Nr 4, pp 1-4 (USSR)

ABSTRACT: The authors describe methods of observing cement hydration processes thru microscopic and photographic studies. The hydration speed of various minerals, the increase in size and quantity of crystals, the transition from one crystal-line form into the other, and the decomposition of aluminum hydroxysulfate were determined. However, the kinetics of the process and the transition of the crystalline forms were not successfully established. Gypsum was the first material to be studied. The MKU-1 microscope assembly (Figure 1), was used. The authors conclude: 1) Gypsum dissolves in the same way in all solvents used, excluding "vinsol" solution. 2) The rates at which the semihydrate was dissolved and $\text{CaSO}_4 \cdot 2\text{H}_2\text{O}$ was formed were different. For minute amounts, the duration of this process in distilled water was 30 - 40 minutes, and in water with additives, 5 - 8 hours. 3) Numer-

Card 1/2

SOV-101-58-4-1/12

The Study of Hydration Processes by Means of a Microscopic Motion Picture Assembly

ous nuclei and very thin needle-shaped crystals were formed.
4) In vinsol solutions, $\text{CaSO}_4 \cdot 2\text{H}_2\text{O}$ crystals were formed in reduced quantities but the crystals were larger in size. In naphtha soap solution, crystallization occurred only in close proximity to aggregations of semihydrate fragments. Microcine-photography of clinker hydration processes is now being carried out.

There are 7 sets of photos.

TITLE: Mechanized Delivery of Pit-Props in Mines (Mekhanizatsiya dostavki krepezhnogo lesa na shakhtakh)

PERIODICAL: Mekhanizatsiya trudoyemkikh i tyazhelykh rabot, 1958, Nr 7,
pp 28-29 (USSR)

ABSTRACT: In view of the fact that the existing delivery of pit-props has essential deficiencies, the Kuznetskiy nauchno-issledovatel'skiy ugol'nyy institut - KuzNIUI (the Kuznetsk Scientific Research Institute of Coal Mining) has designed, constructed and introduced at the lumber yard of the "Koksovaya" coal mine im. Stalina, the electro-mechanical suspended monorail track of the type MD-1. The speed of the carriage is 0.3 m per sec; the motor of the ER-5 power drill is used as the drive. The construction of the mono-rail track is very simple, easy to as-

Artificial manure and its influence on the yield of plants. N. V. Popov. *Transl. Sci. Inst. Fertilizers and of 3 types of peat (peat moss and meadow peat) were prep'd. on a lab. scale in pots in the following manner: (1) straw without fertilizers, (2) straw and urea, (3) straw with urea and phosphates, (4) straw and $(\text{NH}_4)_2\text{SO}_4$, (5) straw with $(\text{NH}_4)_2\text{SO}_4$ and urea, (6) straw with $(\text{NH}_4)_2\text{SO}_4$ and CaCO_3 , (7) straw and NaNO_3 , (8) peat and $(\text{NH}_4)_2\text{SO}_4$. The straw compacts with urea lost NaNO_3 lost up to 65% of the dry wts., with $(\text{NH}_4)_2\text{SO}_4$ —41%. The peats with $(\text{NH}_4)_2\text{SO}_4$ lost only 5% of dry matter. Straw compacts with NaNO_3 lost 26% of the N, with urea—17%, and with $(\text{NH}_4)_2\text{SO}_4$, the losses were small. The pure straw compacts showed a gain in N. In the urea and nitrate compacts very little NH_3 was found, but with $(\text{NH}_4)_2\text{SO}_4$ considerable NH_3 was found. The $(\text{NH}_4)_2\text{SO}_4$ compacts alone gave a crop yield increase during the first year. J. S. Joffe*

Combined fertilization with manure and mineral fertilizers in the cultivation of summer wheat N. A. Pospisil *Czechoslovakia Societatis Agricola et S.P.R.T.*, No. 17 (1920); *Chimie et Industrie* 43, 311. Use of manure together with mineral fertilizers resulted in a decrease in the removal of N by the crops as compared with a test sowing, no manure; the grain yield was increased. Manure therefore contributed to a better utilization of soil and fertilizer N by the plants. In the combined fertilization of summer wheat grown on humic Chernozem soil by means of fermented manure and mineral fertilizers it is the N, not the P, which should be added first to the manure. A. TITLE: High-quality steel for tractor transmission gears 17

SOURCE: Tekhnologiya i organizatsiya proizvodstva

TOPIC TAGS: nickel steel, tempering, transmission gear, contact stress, tensile strength

ABSTRACT: The authors discuss the development of a series of grades of steel containing small amounts of nickel and therefore less expensive than chrome-nickel steel. The new grades have been used and tested at the Department of Metal Technology of USKha and the Central Plant Laboratory of the Volgograd Tractor Plant. This Plant Laboratory has proposed a new grade of steel (251 KhGSNT) with the following composition (in %): C 0.20-0.26, Mn 1.0-1.3, Si 0.8-1.0, Cr 1.1-1.4, Ni 0.9-1.2, Ti 0.05-0.10, P less than 0.04 and S less than 0.05. The mechanical properties of this new steel were compared with those of 20KhNZA high-nickel steel after normalization by pseudocarbonization, quenching and low-temperature tempering. This comparison showed that the mechanical

Card 1/2 * 20XH3A

L 03769-67

ACC NR: AP6019852

3

properties of the new grade of steel are superior to those of 20KhNZA. Additional tests were carried out to determine the applicability of the new grade of steel in making parts, and in particular its ability to withstand heavy loads such as those which occur in tractor transmissions. The sensitivity of this steel to concentrated stresses was studied by bending circular specimens with annular cuts. Analysis of the results shows that 25KhGSNT steel is less sensitive to concentrated stresses than 20KhNZA steel. The contact strength of the steel was also tested on a three-roller machine made by the Institute of Mechanics of the Academy of Sciences UkrSSR. Stresses at the point of contact during testing were $200\text{-}450 \text{ kg/mm}^2$ with a test base of 10^7 cycles. The tensile strength of the new steel is 300 kg/mm^2 while that of 20KhNZA is 250 kg/mm^2 . Products made from 25KhGSNT steel require moderate cooling after normalization. This steel has been used by the Volgograd Tractor Plant for several series of gears in the transmissions of the DT-54A and DT-75 tractor engines. Tests of these gears under operating conditions show satisfactory results. The new grade of steel gives a savings of 20-25 kg of nickel per ton of steel, an economy of more than 2 kg of nickel per transmission. Orig. art. has: 3 tables.

TITLE: Non-nickel alloy steels for heavily loaded parts

CITED SOURCE: Sb. Legirovaniye staley. Kiyev, Gostekhnizdat USSR,
1963, 41-46

TOPIC TAGS: alloy steel, load, steel bolt, connecting rod bolt, bolt

TRANSLATION: The structure and properties of 40KhN, 40Kh, 45G2, and
30KhGSA steels were investigated for the purpose of choosing the
correct material for connecting rod bolts. Practical tests were also
carried out of connecting rod bolts under elongation and with cyclic
elongation-compression loads at a frequency of 1,000 cycles/min under
a stress on a minimum cross section area of the bolt of 20-24 kg/mm².
Elongation tests showed that 45Kh, 45G2, and 30 KhGSA steels guarantee
the required strength of the bolt. In fatigue tests, the largest

Card 1/2

L 14009-65

ACCESSION NR: AR4045892

number of cycles up to destruction was registered for 30KhGSA steel, which also showed the minimum sensitivity to a concentration of stresses. The series of tests showed that the use of 40KhN steel for connecting rod bolts is not recommended. Based on data for strength, hardenability, and structure, the use of 30KhGSA steel is recommended.

TITLE:

All-Union Conference on the hardfacing of dies for hot and cold
press-forming

(16)

PERIODICAL: Svarochnoye proizvodstvo, no. 3, 1963, 44 - 45

TEXT: The First All-Union Scientific-Technical Conference on hardfacing of dies was held at Volgograd from November 27 - 29, 1962. The Conference heard the following reports: N. T. Prosvirov (VNIIPIMASH) on "Operational conditions and the type of forging dies"; L. A. Pozdnyakova (ENIKMASH) on "Problems of the durability of dies and press-forming steels"; V. A. Popov, ENIKMASH, on some structural peculiarities of carbide tools for cold extrusion and upsetting; I. I. Frumin, B. V. Danil'chenko (Institute of Electric Welding imeni Ye. O. Paton) on "Electric-slag hardfacing of some dies"; L. Kolomiets (IES imeni Ye. O. Paton) on "Reconditioning of dies by electric-slag hardfacing"; V. A. Timchenko (IES imeni Ye. O. Paton) on "A machine with program control for automatic hardfacing of forging dies"; Reports on manual arc-hardfacing of dies were delivered by N. V. Popov (Volgograd Tractor Plant), V. M. Panovko and Ye. O. Bloshkin (Moscow Experimental Welding Plant); O. D. Superko (Chelyabinsk Tractor Plant), N. I. Nikolko (Ural Heavy Machinebuilding Plant), P. M. Sapov ("Rostsel-mash"), N. I. Kuzovkova (GAZ), Yu. P. Zaytsev (ENIKMASH), V. I. Il'yin (ZIL), Gopovin (Khar'kov "Svet shakhtera" Plant), and others. In a decision the Conference mentioned deficiencies connected with the subject, i.e. lack of unified electrodes; of centralized production; of unified technological instructions on the hardfacing of dies; of methods for evaluating the quality of hardfaced metal, and lack of high-quality electrodes for hardfacing cast-iron dies. The Conference decided to take steps in order to eliminate the aforementioned deficiencies.

TITLE: The result of applying neutron impulse methods and apparatus for investigating borehole logs

PERIODICAL: Referativnyy zhurnal, Geofizika, no. 11, 1961, 34, abstract 11A304 (V sb. Yadern. geofiz. pri poiskakh polezn. iskopayemykh, M., Gostoptekhizdat, 1960, 3-20)

TEXT: A borehole impulse generator of neutrons is described together with the method of impulse-neutron neutron-logging (INNL). A description is given for the electronic layout of the borehole generator of neutrons and the surface apparatus for impulse neutron logging. During laboratory tests of the generator a stable mean neutron yield of $\sim 2 \times 10^7$ neutr./sec. was obtained at 100 kv. of accelerating voltage in the tube. The impulse duration amounted to 100

The result of applying neutron ...

usec, the transmission frequency being 400 c/s. The neutron generator was used in the commercial testing of INNL. INNL readings against oil-bearing beds exceed by 10 times those for aquiferous beds containing mineralized water, at a delay time of 1000 μ sec. Certain impediments and limitations of thermal impulse neutron-logging in different oil- and water-saturated beds are indicated, and the requirements for the apparatus are stated. Further prospects are indicated for the application of impulse neutron generators. (Abstractor's note: Complete translation). ✓

Candidate of Physics and Mathematics; Ya. Kh. Turakulov, Doctor of Biological Sciences. Ed.: R. I. Khamidov; Tech. Ed.: A. G. Babakhanova.

PURPOSE : The publication is intended for scientific workers and specialists employed in enterprises where radioactive isotopes and nuclear radiation are used for research in chemical, geological, and technological fields.

COVERAGE: This collection of 133 articles represents the second volume of the Transactions of the Tashkent Conference on the Peaceful Uses of Atomic Energy. The individual articles deal with a wide range of problems in the field of nuclear radiation, including: production and chemical analysis of radioactive isotopes; investigation of the kinetics of chemical reactions by means of isotopes; application of spectral analysis for the manufacturing of radioactive preparations; radioactive methods for determining the content of elements in the rocks; and an analysis of methods for obtaining pure substances. Certain
